### Report Overview

End-of-life Tire (ELT) Recycling and Pyrolysis refers to the process of recycling and repurposing used tires that have reached the end of their useful life. This process involves breaking down the tires into smaller components or raw materials, which can then be used in various industries. Pyrolysis, a key method in ELT recycling, is a thermal decomposition process that occurs in the absence of oxygen, breaking down the tires into valuable products such as oil, gas, and carbon black. These products can be further utilized in the manufacturing of new tires, construction materials, fuel, and other industrial applications. The ELT recycling and pyrolysis industry plays a crucial role in reducing waste, conserving resources, and mitigating the environmental impact of tire disposal.
