Report Overview

An endoscopic hemostatic clip is a medical device used in gastrointestinal endoscopy procedures to achieve hemostasis, which is the cessation of bleeding from blood vessels or lesions in the digestive tract. These clips are typically made of biocompatible materials such as titanium or polymer and are designed to be deployed via an endoscope. They feature a mechanism that allows them to grasp and secure tissue, effectively closing off bleeding blood vessels or lesions during procedures like endoscopic resections, polypectomies, or treatment of gastrointestinal ulcers. Endoscopic hemostatic clips are crucial in minimizing bleeding complications, promoting patient safety, and facilitating faster recovery in patients undergoing therapeutic gastrointestinal interventions.
