Report Overview

Endoscopic Ligation Clips are specialized medical devices designed for use in endoscopic procedures, particularly for the treatment of gastrointestinal bleeding or polyp removal. These clips are typically made from biocompatible materials such as stainless steel or titanium, ensuring patient safety and minimizing the risk of adverse reactions. The clips function by securely fastening onto the targeted tissue, allowing for hemostasis (??) or the removal of polyps without the need for sutures. They are applied through an endoscope, a flexible tube with a camera and lighting, which is inserted into the body to access the area in need of treatment. The clips are released from the endoscope's tip and grasp the tissue, providing a quick and effective method for managing bleeding or excising polyps. The use of endoscopic ligation clips is a minimally invasive approach that reduces recovery time and complications compared to traditional surgical methods.
