Report Overview

An Engine Silencer, also known as a muffler, is a crucial component in the exhaust system of an internal combustion engine. Its primary function is to reduce the noise produced by the engine by dissipating the energy of the exhaust gases. The product is designed with a series of chambers and baffles that help in minimizing the sound waves generated during the combustion process. This device not only helps in noise reduction but also plays a significant role in controlling the emission of harmful pollutants by ensuring that the exhaust gases are expelled at a slower rate, allowing for better catalytic conversion.
