Report Overview

Engine Valve Covers, also known as cam covers or valve cover gaskets, are essential components in an internal combustion engine. They are designed to protect the valve train components, such as the camshaft, lifters, and rocker arms, from dirt, debris, and moisture. These covers are typically made from metal or plastic and are mounted on top of the engine's cylinder head. Their primary function is to create a sealed environment around the valve train, preventing contaminants from entering and ensuring the longevity and optimal performance of the engine. Additionally, engine valve covers often feature a decorative design, enhancing the visual appeal of the engine bay.
