Abstracts

Engineered Centrifugal Air Compressor is a subdivision of air compressors. An air compressor is a pneumatic device that converts power (using an electric motor, diesel or gasoline engine, etc.) into potential energy stored in pressurized air. By one of several methods, an air compressor forces more and more air into a storage tank, increasing the pressure. When the tank's pressure reaches its engineered upper limit, the air compressor shuts off. The compressed air, then, is held in the tank until called into use.

The global Engineered Centrifugal Air Compressor market size was estimated at USD 2150.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
