Report Overview

Engineered Crumb Rubber Asphalt (E CRA) is a type of modified asphalt pavement material that incorporates crumb rubber, a byproduct of recycled tires, into the traditional asphalt mixture. This innovative product enhances the performance and durability of asphalt pavements by improving their resistance to cracking, rutting, and reflective cracking. The crumb rubber particles provide additional flexibility and elasticity to the asphalt, which can better withstand temperature fluctuations and heavy traffic loads. E CRA is not only an environmentally friendly solution for tire disposal but also offers significant benefits in terms of road longevity and reduced maintenance costs. It is commonly used in various road construction and repair projects, particularly in areas with high traffic volume or where improved performance is required.
