Abstracts

Engineering Logistics Service fundamentally addresses five major industry pain points in critical engineering projects: difficulties in transporting oversized and heavy equipment, complex cross-border supply chain coordination, uncontrollable costs, numerous high-risk processes, and cumbersome multi-interface management. Through specialized solutions, ECLS ensures the safe and timely delivery of critical equipment, guaranteeing overall project progress and budget. Engineering Logistics Service provides specialized, end-to-end logistics solutions for major engineering projects (such as power facilities, petrochemical plants, and infrastructure projects). Its core lies in solving the challenges of moving oversized, overweight, and precision equipment within complex supply chains by integrating specialized transport equipment, customized packaging, multimodal transport, and on-site management. The service spans the entire project lifecycle, covering pre-project route surveys and design, mid-project port handling, ocean shipping, inland transshipment, and on-site hoisting, and post-project material management and reverse logistics. Unlike general cargo logistics, engineering logistics must handle high-value goods, stringent timeframes, and dynamic risks. Its value lies not only in the movement of materials but also in ensuring the achievement of project milestones through precise planning and risk control, serving as a crucial guarantee for the timely commissioning of large-scale engineering projects. The costs of Engineering Logistics Service primarily consist of the use of specialized transportation equipment, investment in highly skilled personnel, insurance premiums, and cross-border coordination expenses. Its gross profit margin exhibits a typical polarization: standardized transportation services, due to intense competition, generally maintain a gross profit margin of 15%-25%; while high-value-added services involving complex solution design, multimodal transport integration, and special risk management, due to technological barriers and resource integration difficulties, can achieve a gross profit margin of 35%-50%, reflecting the premium pricing power brought by professional

solutions.

The global Engineering Logistics Service market size was estimated at USD 1770.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.60% during the forecast period.
