Report Overview

Entacapone Tablets is a pharmaceutical product designed to be used in conjunction with levodopa, a medication commonly prescribed for the treatment of Parkinson's disease. Entacapone is a catechol-O-methyltransferase (COMT) inhibitor that works by blocking the enzyme responsible for breaking down levodopa, thereby extending the duration of action of levodopa in the brain. This helps to reduce the frequency of "off" periods, where Parkinson's symptoms re-emerge, and can improve overall motor function and control in patients. The tablets are typically taken orally and are an essential component in the management of Parkinson's disease symptoms, particularly in advanced stages or when patients experience motor fluctuations.
