Report Overview

Entacapone, Levodopa, and Carbidopa Tablets is a pharmaceutical product that combines three active ingredients to manage the symptoms of Parkinson's disease. Levodopa is a precursor to dopamine, a neurotransmitter that is depleted in Parkinson's patients, and it helps to alleviate motor symptoms. Carbidopa is included to prevent the premature conversion of levodopa into dopamine outside the brain, thereby increasing its effectiveness. Entacapone is a catechol-O-methyltransferase (COMT) inhibitor that further extends the duration of action of levodopa by blocking its metabolic breakdown. This combination therapy is designed to optimize the therapeutic effects of levodopa while minimizing side effects and fluctuations in symptom control, providing a more stable and sustained response in the treatment of Parkinson's disease.
