## Abstracts

Enterprise Service Bus (ESB) Tool is a software architecture pattern that supports real-time data exchange between different applications. Large organizations have multiple applications that use different data models, protocols, and security restrictions to perform various functions. ESB simplifies application integration by performing operations such as data transformation, protocol conversion, message routing, etc. Applications pass relevant data to the ESB, which then transforms and forwards the data to other applications that need it. The Enterprise Service Bus (ESB) Tool market is driven by the growing need for seamless integration of applications, services, and data flows across complex IT infrastructures. ESB tools act as middleware platforms that enable communication, orchestration, and interoperability between heterogeneous systems, supporting both on-premises and cloud environments.
