Abstracts

EO/IR (Electro-Optical/Infra-Red) systems are imaging systems used for military or law enforcement applications which include both visible and infrared sensors. Because they span both visible and infrared wavelengths, EO/IR systems provide total situational awareness both day and night and in low light conditions. Critical features of EO/IR systems are long-range imaging abilities and image stabilization. EO/IR sensors are usually mounted on aircraft or vehicles, used at sea, or are hand-carried, and must be able to identify targets, track moving targets, and assess threats from a distance and in challenging environmental conditions. Common applications of EO/IR systems include airborne homeland security, combat, patrol, surveillance, reconnaissance, and search and rescue programs.

The global Eo Ir Electro Optical Infra Red Systems market size was estimated at USD 11500.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
