Report Overview

Epoxy adhesives for ingot slicing are a type of strong, two-component adhesives specifically designed for bonding and fixing ingots during the slicing process. These adhesives are formulated to provide excellent adhesion, high strength, and durability under various conditions. They are typically composed of a resin and a hardener, which, when mixed together, create a chemical reaction that results in a strong bond. The adhesives are engineered to withstand high temperatures and pressures that are common in the ingot slicing process, ensuring that the ingots remain securely in place and do not move or shift during cutting. This is crucial for maintaining precision and achieving a clean, accurate cut. Additionally, epoxy adhesives for ingot slicing may offer resistance to chemicals and moisture, further enhancing their suitability for use in metalworking applications.
