## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Ethyl Ferulate (EF) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Ethyl ferulate, chemically known as ethyl 4-hydroxy-3-methoxycinnamate, has the molecular formula  $C_{15}H_{14}O_4$  and CAS number 4046-02-0. It appears as a white crystalline powder with a melting point of 63-65°C and requires storage in a light-protected, sealed container. As a derivative of ferulic acid, it is found in plants such as *Angelica sinensis* and *Ligusticum chuanxiong*. It exhibits pharmacological activities including inhibition of thrombus formation, immune regulation, and scavenging of oxygen free radicals. Global sales of ethyl ferulate reached 690 tons in 2024, with an average selling price of \$179.43 per kilogram.

**Development Trends**  
**Demand Growth:** With increasing public focus on health and beauty, demand for ethyl ferulate is expected to grow steadily across pharmaceuticals, cosmetics, and food sectors. For instance, its application as a raw material for drugs treating cardiovascular diseases and leukopenia may expand in the pharmaceutical field. In cosmetics, market demand could rise further due to its antioxidant and skincare benefits.  
**Technological Innovation:** Technological innovation is emerging as a key competitive driver. For instance, replacing traditional sulfuric acid catalysts with solid acid catalysts enhances reaction efficiency while reducing environmental pollution. Additionally, companies may continually explore new production processes and technologies to improve product quality and lower manufacturing costs.

**Application Fields**  
**Pharmaceutical Sector:** Serves as a fundamental raw material for producing medications treating cardiovascular diseases and leukopenia, such as Xinxuekang and Limai Capsules. Additionally, it regulates immune function and antagonizes chemically induced liver damage.  
**Cosmetics:** Exhibits free

radical scavenging, antioxidant, microcirculation-promoting, skin-beautifying, and protective properties. It can be incorporated into various skincare products like creams and serums to help reduce skin aging and maintain skin health. Food Industry: Used as a food additive, ethyl ferulate extends shelf life and prevents oxidation and spoilage in food products.

The global Ethyl Ferulate (EF) market size was estimated at USD 124.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
