Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Ethylene Methacrylic Acid Copolymers (EMAA) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Ethylene Methacrylic Acid Copolymers (EMAA) are thermoplastic resins made by free radical polymerization of ethylene and methacrylic acid in an autoclave. Their molecular structure combines the flexibility and chemical resistance of polyethylene with the adhesion and transparency of methacrylic acid, and also has excellent oil resistance, impact resistance and heat sealing properties. The global Ethylene Methacrylic Acid Copolymers (EMAA) market is highly concentrated. The major global manufacturers of EEA include Dow-Mitsui Polychemicals, Sumitomo Chemical, INEOS, etc. The performance of ethylene-methacrylic acid copolymer (EMAA) depends on the content of MAA. Its melting point, rigidity, and tensile yield strength are all lower than those of polyethylene, and decrease with the increase of MAA content. The air permeability and environmental stress cracking resistance increase with the increase of MAA content. EMAA has a promising market prospect in the future. With the continuous growth of demand for high-performance materials in various industries and the continuous advancement of technology, EMAA will continue to play its unique advantages and usher in wider applications and a larger market share.

The global Ethylene Methacrylic Acid Copolymers (EMAA) market size was estimated at USD 92.7 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.60% during the forecast period.
