### Report Overview

The EUV dry resist precursor market is a specialized segment within the semiconductor materials industry, catering to the advanced lithography processes used in manufacturing cutting-edge chips. EUV (extreme ultraviolet) dry resist precursors are chemical formulations designed to enhance the performance of photoresists under EUV lithography, which is critical for producing sub-7nm node semiconductors. Unlike traditional wet resists, dry resists eliminate the need for liquid development, reducing defects and improving resolution?key factors in high-volume chip production. The market is driven by the semiconductor industry's push toward smaller, faster, and more energy-efficient devices, with major players like ASML, Intel, and TSMC accelerating demand. However, the market faces challenges such as high R&D costs, stringent material purity requirements, and the complexity of scaling production. Geopolitical tensions and supply chain dependencies further influence market dynamics, particularly as key suppliers are concentrated in regions like the U.S., Japan, and South Korea. As EUV adoption grows, innovations in resist chemistry and process integration will be crucial to maintaining competitiveness.
