Report Overview

EVA (Ethylene-Vinyl Acetate) Wax and Oxidized EVA Wax are types of polymer waxes derived from the copolymer of ethylene and vinyl acetate. EVA wax is a versatile material known for its excellent adhesion, flexibility, and compatibility with various substrates. It is widely used in applications such as hot melt adhesives, coatings, and sealants due to its ability to provide a strong bond and improve the overall performance of these products. Oxidized EVA wax, on the other hand, is a variant of EVA wax that has undergone an oxidation process, which modifies its molecular structure and properties. This oxidation can enhance certain characteristics, such as tackiness and adhesion, making it suitable for specific applications where improved bonding or other properties are required. Both EVA and Oxidized EVA waxes are valued for their ability to customize the performance of formulations in various industries, including packaging, construction, and textiles.
