Report Overview

EVA Sheet for Solar Panel refers to a type of ethylene-vinyl acetate (EVA) film specifically designed for use in the manufacturing of solar panels. This product serves as a critical component in the lamination process, where it is sandwiched between the glass cover, solar cells, and backsheet to form a complete solar module. The EVA sheet plays multiple roles, including providing a barrier against moisture and oxygen, which can degrade the performance of the solar cells over time. It also offers structural support and maintains the integrity of the panel. Additionally, the EVA sheet helps in adhering the layers together, ensuring a uniform distribution of stress and preventing delamination. High-quality EVA sheets are characterized by their excellent optical clarity, resistance to UV degradation, and long-term stability, which are essential for the efficiency and longevity of solar panels.
