## Abstracts

An Evaporation Type Vacuum Coating Machine is a specialized piece of equipment used to deposit thin films onto various substrates through the process of thermal evaporation. This physical vapor deposition (PVD) technique involves heating a source material, typically in the form of a solid, until it reaches its boiling point and evaporates into a vapor. The vapor then condenses onto a cooler substrate surface, forming a thin film layer. The entire process takes place under high vacuum conditions to minimize contamination and ensure proper film formation.

The global Evaporation Type Vacuum Coating Machine market size was estimated at USD 1850.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
