Abstracts

Evaporative Cooling pad is a special paper honeycomb structure material. Its working principle is the natural physical phenomenon of 'water vapor absorbs heat'. It uses the principle of negative pressure ventilation to eliminate waste gas and pollution in the factory building and solve high temperature and stuffiness. Under the action of strong water, water flows from top to bottom, forming a water film on the surface of the wet curtain corrugated fabric. When the fast-flowing air passes through the wet curtain, the water in the water film will absorb the heat in the air and then evaporate, bringing Take a lot of latent heat to reduce the temperature of the air passing through the wet curtain, so as to achieve the goal of falling.
