Report Overview

Evoh five-layer co-extruded film is a high-performance packaging material composed of ethylene vinyl alcohol (EVOH) as the core barrier layer, sandwiched between layers of polyethylene (PE) or polypropylene (PP) for structural support and sealing properties. This multilayer structure combines excellent oxygen and moisture barrier capabilities with mechanical strength, making it ideal for food packaging, pharmaceuticals, and industrial applications where extended shelf life and product protection are critical. The co-extrusion process ensures uniform layer distribution, enhancing durability and resistance to punctures, while EVOH's high gas barrier properties prevent oxidation and spoilage. Its versatility allows customization in thickness, transparency, and sealability to meet specific industry requirements, positioning it as a premium solution in flexible packaging. The market for this film is driven by increasing demand for advanced packaging solutions in food preservation, healthcare, and consumer goods, alongside growing emphasis on sustainability and lightweight materials. Key players focus on innovation in recyclability and bio-based alternatives to align with environmental regulations and shifting consumer preferences.
