Report Overview

Excimer lasers lift-off (ELLO) equipment is a specialized type of laser processing system used primarily in the semiconductor and display industries to precisely separate thin films, substrates, or layers without damaging the underlying material. These systems utilize high-energy ultraviolet (UV) excimer lasers, which emit short pulses of light at specific wavelengths (e.g., 248 nm or 308 nm), enabling highly controlled ablation or decomposition of adhesive layers or sacrificial materials. The technology is critical for advanced manufacturing processes, such as flexible OLED display production, microLED fabrication, and semiconductor packaging, where delicate materials require non-contact, high-precision separation. Key advantages of ELLO equipment include minimal thermal impact, high resolution, and the ability to process large-area substrates, making it indispensable for next-generation electronics. The market demand is driven by the growing adoption of flexible displays, mini/microLED technologies, and the need for high-yield, scalable production methods in cutting-edge applications.
