Report Overview

Exfoliating masks are skincare products specifically designed to remove dead skin cells, impurities, and excess oil from the skin's surface. These masks typically contain abrasive ingredients such as natural exfoliants (e.g., fruit enzymes, alpha hydroxy acids, or beta hydroxy acids), synthetic beads, or physical scrubs that work to slough off the top layer of skin, revealing a smoother, brighter complexion. They are often used to improve skin texture, reduce the appearance of pores, and promote the absorption of other skincare products. Exfoliating masks can be formulated for various skin types, from sensitive to oily, and may include additional ingredients such as antioxidants, vitamins, and soothing agents to provide additional benefits beyond exfoliation. Regular use of exfoliating masks can help maintain skin health and prevent clogged pores, but it is essential to follow the recommended frequency of use to avoid over-exfoliation and skin irritation.
