Report Overview

Expanded PVC Sheet, also known as foam PVC or cellular PVC, is a type of thermoplastic material that has been specifically engineered to have a low-density, lightweight structure. This product is created by introducing air or other gases into the PVC during the manufacturing process, which results in a foam-like structure with numerous closed cells. This process significantly reduces the weight of the material while maintaining its durability and strength. Expanded PVC sheets are characterized by their excellent insulation properties, resistance to chemicals, and ability to withstand harsh weather conditions. They are commonly used in various applications such as signage, advertising boards, model making, and construction due to their lightweight, ease of fabrication, and cost-effectiveness. The material's expanded nature also provides good sound and thermal insulation, making it suitable for a range of industrial and commercial uses.
