Abstracts

Experimental Sputtering Coating Equipment refers to specialized machinery and setups designed for research and development purposes, focusing on the deposition of thin films through the sputtering process. Sputtering is a physical vapor deposition (PVD) technique where atoms are ejected from a solid target material due to bombardment by high-energy particles, typically ions, and then deposited onto a substrate to form a thin film. Experimental setups allow scientists and engineers to explore new materials, processes, and coatings under controlled conditions, often pushing the boundaries of what is achievable with standard commercial sputtering systems.

The global Experimental Sputtering Coating Equipment market size was estimated at USD 950.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
