Abstracts

Exploding bridge wire detonators (EBWs) are devices designed for initiating high-explosive materials in a controlled and precise manner. They consist of a thin wire bridge made from materials like nickel-chromium or other alloys. When an electrical current is passed through the bridge wire, it rapidly heats and vaporizes, creating a high-pressure shockwave that initiates the explosive material. EBWs are known for their reliability, precision, and speed, making them valuable in various applications such as military ordnance, industrial mining, and controlled demolitions. Their ability to provide precise and simultaneous initiation makes them suitable for applications where precision and accuracy are crucial. EBWs are often used in combination with electronic firing systems, offering a safer and more controlled alternative to traditional methods of initiating explosives.

The global Exploding Bridge Wires Ebw Detonators market size was estimated at USD 32.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.15% during the forecast period.
