Abstracts

Explosion Isolation Valve for Battery is a safety protection device used in battery modules or energy storage equipment. Its primary function is to monitor the internal pressure and temperature of the battery. When the pressure or temperature exceeds a preset value, the valve will rupture along a pre-scored line and release pressure, thereby reducing the internal pressure of the battery and preventing explosion accidents. This valve plays a crucial role in ensuring the safe operation of batteries, especially in scenarios where overcharging, overheating, or other abnormal conditions may lead to increased pressure and temperature within the battery. By providing a controlled release of pressure, the explosion isolation valve helps to maintain the structural integrity of the battery and prevent catastrophic failures.
