Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Express Unmanned Delivery Vehicle competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Express Unmanned Delivery Vehicle production reached approximately 14k units, with an average global market price of around US\$ 26k per unit. Express Unmanned Delivery Vehicles are autonomous low-speed logistics vehicles designed for last-mile parcel distribution in urban environments. Equipped with LiDAR, cameras, ultrasonic sensors, GPS/RTK, high-performance computing units, remote monitoring systems, and intelligent cargo lockers, these vehicles can autonomously plan routes, detect obstacles, avoid collisions, perform precise deliveries, and enable secure parcel retrieval. They provide safe low-speed operation, 24/7 availability, stable delivery performance, and significantly reduced labor costs. As a core solution for high-demand last-mile logistics, express unmanned delivery vehicles are among the fastest-growing applications of autonomous driving technology in commercial deployment. The upstream of express unmanned delivery vehicles mainly includes core components for autonomous driving, such as LiDAR (RoboSense, Hesai, Ouster), millimeter-wave radar (Bosch, Desay), high-definition cameras and vision modules (Sunny Optical, OmniVision), computing platforms (NVIDIA, Horizon Robotics, Intel), battery modules (CATL, BYD), motors, and chassis systems. The midstream consists of vehicle manufacturers and system integrators, such as JD.com, Neolix, White Rhino, Robomart, Starship Technologies, and Nuro, responsible for vehicle design, autonomous driving system integration, remote dispatch platforms, and operational adaptation. Downstream applications include express delivery companies (SF Express, JD Logistics, Cainiao), food delivery platforms (Meituan, Ele.me), instant retail, campus delivery, park logistics, and last-mile delivery in communities, providing

large-scale deployment for smart logistics in cities. The annual production capacity of a single-line Express Unmanned Delivery Vehicle is approximately 1k unit, with a gross profit margin of approximately 25%-35%. The express unmanned delivery vehicle market is entering a rapid commercialization phase, driven by the expansion of e-commerce, the rise of instant retail, increasing labor costs in last-mile logistics, and policy support for smart logistics. As low-speed autonomous driving regulations evolve, deployment scenarios are expanding across urban sidewalks and communities. Meanwhile, declining sensor and computing prices are pushing overall vehicle costs downward, enabling larger-scale deployment. Logistics companies are accelerating their shift toward unmanned, low-cost, and 24/7 delivery operations, making autonomous delivery vehicles a vital supplement to last-mile networks. With advancements in digital dispatching, teleoperation, and AI route optimization, these vehicles are becoming essential infrastructure for smart cities and future logistics systems.

The global Express Unmanned Delivery Vehicle market size was estimated at USD 367.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 17.40% during the forecast period.
