Report Overview

Extraction Thimble is a specialized laboratory device designed for the precise and controlled extraction of small volumes of liquid samples. It is typically made from a transparent, chemically resistant material such as glass or plastic, and features a narrow, tapered shape that allows for the easy collection and dispensing of samples. The thimble's design facilitates the separation of liquid phases, making it particularly useful in procedures such as liquid-liquid extraction, where one liquid phase is separated from another based on differences in their solubility.
