Report Overview

The eye lotion balanced salt solution (BSS) market revolves around a sterile, isotonic solution designed to mimic the natural composition of tears, primarily used in ophthalmic procedures such as cataract surgery, corneal transplantation, and intraocular lens implantation. Its key components—sodium chloride, potassium chloride, calcium chloride, and other electrolytes—ensure physiological compatibility, reducing the risk of corneal endothelial cell damage. The product serves as an irrigation and hydration solution during surgeries, as well as a storage medium for donor corneas, making it indispensable in ophthalmology. Demand is driven by the rising prevalence of eye disorders, aging populations, and increasing surgical interventions globally. The market is characterized by stringent regulatory standards, competition among established pharmaceutical and medical device companies, and innovations such as preservative-free formulations. Growth is further supported by expanding healthcare infrastructure in emerging economies and advancements in ophthalmic surgical techniques.
