Report Overview

An Eye Prosthesis is a medical device designed to replace a missing or damaged eye, providing both functional and cosmetic benefits to the wearer. It is typically made from materials such as acrylic, glass, or silicone, which are crafted to closely resemble the natural eye in terms of shape, size, and color. The prosthesis is custom-made to match the wearer's remaining eye, ensuring a natural appearance. Functionally, it can help maintain the shape of the eyelids and socket, preventing them from collapsing or sinking over time. Additionally, an eye prosthesis can contribute to the overall balance and symmetry of the face, which is crucial for self-esteem and social interactions. It is often used in cases of ocular trauma, congenital conditions, or following the surgical removal of an eye due to disease or injury. The fitting and maintenance of an eye prosthesis are typically overseen by an ophthalmologist, a specialist trained in the creation and fitting of these devices.
