### Report Overview

F-mount lenses are a line of interchangeable camera lenses designed by Nikon for its F-mount system, introduced in 1959. This bayonet-style mount has remained largely unchanged in its mechanical design, ensuring backward compatibility with a vast range of Nikon DSLRs and film cameras, though electronic communication protocols have evolved over time. F-mount lenses cover a wide spectrum of focal lengths, apertures, and specialized optics, including prime, zoom, macro, and telephoto lenses, catering to both amateur and professional photographers. The longevity of the F-mount system has fostered a robust ecosystem of first-party Nikon lenses as well as third-party offerings from manufacturers like Sigma, Tamron, and Tokina. However, with Nikon's shift toward mirrorless cameras and the Z-mount system, the F-mount lens market has seen declining new releases from Nikon, though used and third-party options remain popular due to affordability and compatibility with older DSLRs. The market is now segmented between legacy users maintaining DSLR setups and adapters enabling F-mount lenses on mirrorless bodies, sustaining demand in a transitioning industry.
