Report Overview

Fabricated strainers are specialized filtration devices designed to remove impurities and debris from various types of fluids, such as water, oil, or gas, in industrial and commercial applications. These strainers are typically constructed from metal materials, such as stainless steel or carbon steel, and are custom-engineered to meet specific flow rates, pressure ratings, and size requirements. They consist of a perforated or slotted basket or screen that traps contaminants while allowing the fluid to pass through. Fabricated strainers can be designed with various types of strainers, such as Y-strainers, T-strainers, or duplex strainers, and are often used in applications where high-quality filtration is critical, such as in HVAC systems, water treatment facilities, and food processing plants. They are known for their durability, ease of maintenance, and ability to withstand high temperatures and pressures.
