Report Overview

Face Lift Threads, also known as thread lifts or suture lifts, is a minimally invasive cosmetic procedure that utilizes specialized surgical threads to lift and tighten the skin, particularly in the face and neck area. These threads are made from materials like polydioxanone (PDS) or poly-L-lactic acid (PLLA), which are biocompatible and gradually absorbed by the body over time. The threads are inserted beneath the skin in a strategic pattern, creating a scaffold-like structure that encourages the production of collagen and elastin, leading to a more youthful and?? appearance. This procedure is designed to address sagging skin, jowls, and wrinkles, offering a less invasive alternative to traditional facelift surgery with a shorter recovery time and fewer risks.
