Report Overview

A Facial Negative Pressure Mask, also known as a Continuous Negative External Pressure (CNEP) mask, is a medical device designed to provide non-invasive treatment for patients with chronic obstructive pulmonary disease (COPD), sleep apnea, or other respiratory conditions. This device works by applying a gentle negative pressure to the patient's face, which helps to keep the airways open and facilitates easier breathing. The mask is typically made of soft, flexible materials to ensure comfort during use and is connected to a machine that generates the negative pressure. The mask is worn over the nose and mouth, or sometimes just the nose, and is secured with straps or headgear.
