Report Overview

A Fan Coil Unit (FCU) is a type of HVAC (Heating, Ventilation, and Air Conditioning) system component that is commonly used in buildings to provide individual zone climate control. It consists of a fan, heating and cooling coils, and a casing, which work together to circulate air within a specific area. The FCU draws return air from the space it serves, passes it over the cooling or heating coils to either cool or heat the air, and then distributes it back into the space through supply air ducts or directly into the room. These units are often used in conjunction with a central chiller or boiler plant, where the FCU handles the air distribution and temperature regulation, while the central plant provides the necessary heating or cooling medium. FCUs are valued for their energy efficiency, flexibility in design, and ability to provide precise temperature control in various spaces, making them suitable for commercial buildings, hotels, and residential applications.
