Report Overview

Feed grade hemoglobin powder is a high-protein animal-derived ingredient produced from blood collected during meat processing, primarily from swine or cattle. It undergoes spray-drying or other stabilization methods to create a fine, soluble powder rich in iron, amino acids, and bioactive peptides. This product serves as a nutritional supplement in livestock, poultry, and aquaculture feed due to its palatability-enhancing properties, immune-boosting potential, and ability to improve feed conversion ratios. The hemoglobin content typically ranges between 85-95%, with strict quality controls to ensure pathogen-free status and consistent nutrient profiles for animal health applications. As a byproduct valorization solution, it aligns with circular economy principles in the meat industry while meeting the growing demand for alternative protein sources in animal nutrition.
