Report Overview

Ferro Phosphorus Powder is a chemical compound consisting of iron (Fe) and phosphorus (P) elements, typically used in various industrial applications. This product is a fine, dark gray to black powder that is produced through the reduction of phosphate rock with coke in an electric arc furnace. The resulting ferro phosphorus alloy is then ground into a powder form. Ferro Phosphorus Powder is primarily utilized as an additive in steelmaking to control the phosphorus content, which affects the steel's strength and ductility. It also serves as a deoxidizer, helping to remove excess oxygen from molten steel, thereby improving the steel's quality and performance. Additionally, it can be used in the production of phosphorus-containing chemicals, fertilizers, and other industrial materials. The product is valued for its ability to enhance the properties of steel and contribute to the efficiency of various manufacturing processes.
