Report Overview

Ferrous succinate is an iron supplement that is commonly used to treat iron deficiency anemia. It is a form of iron that has been bound to succinate, which is a salt derived from succinic acid. This combination enhances the absorption of iron in the body, making it more bioavailable and less likely to cause gastrointestinal side effects such as constipation or nausea, which are common with other forms of iron supplementation. Ferrous succinate is often prescribed to individuals, especially women and children, who have low iron levels due to various factors such as poor diet, blood loss, or increased demand during growth and development. It is an essential component in maintaining proper red blood cell production and overall health.
