### Report Overview

The Ferrous Sulfate for Lithium Batteries market refers to the segment of the chemical and battery materials industry that supplies high-purity ferrous sulfate ( $\text{FeSO}_4$ ) as a precursor for producing lithium iron phosphate ( $\text{LiFePO}_4$  or LFP) cathode materials used in lithium-ion batteries. Unlike industrial-grade ferrous sulfate used in agriculture or water treatment, battery-grade ferrous sulfate must meet stringent purity requirements—typically over 98.5%—with minimal contamination from heavy metals. It plays a critical role as the iron source in the chemical reaction that forms LFP, a cathode material valued for its safety, thermal stability, and long cycle life, particularly in electric vehicles (EVs), energy storage systems (ESS), and light mobility devices. This market is closely tied to the growth of LFP-based batteries and is a strategic part of the battery materials supply chain. Market size is typically assessed by the total volume (in tons) of battery-grade ferrous sulfate consumed and the corresponding revenue generated through its use in LFP production.

This report offers a comprehensive and in-depth analysis of the global Ferrous Sulfate for Lithium Batteries market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
