### Report Overview

A Fiber Cystoscope is a medical device used in the field of urology for the examination and diagnosis of the urinary tract, particularly the bladder and urethra. It is an endoscope that employs optical fibers to transmit light and images from the internal structures of the body to the external viewer. The device consists of a long, flexible tube with a light source at the proximal end and a lens system at the distal end, which allows the physician to visualize the interior of the urinary system. Fiber cystoscopes are designed to be inserted through the urethra and into the bladder, providing direct visualization of the bladder wall, ureteral orifices, and any abnormalities that may be present.
