## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Fiber Laser Obstacle Clearer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Fiber Laser Obstacle Clearer is a machine that uses high-energy fiber lasers to remotely and non-contactly remove foreign objects (such as plastic film, kites, bird nests, etc.) from high-voltage power grids. It precisely focuses the laser beam, causing the foreign object to instantly heat up, melt, or vaporize before falling to the ground. This avoids the risks of manual work at heights and the economic losses caused by power outages, while also offering high efficiency and safety. The core component is a high-power fiber laser module, whose performance determines the obstacle removal efficiency and stability. The price of fiber laser obstacle removal devices varies depending on the product, brand, and features, ranging from several thousand to tens of thousands of US dollars. The industry's gross profit margin is between 25% and 35%. With the increasing demands for power supply reliability and operational safety in the power grid and rail transit systems, laser obstacle removal, as a non-contact, rapid, and highly efficient method, can significantly reduce power outage time and the risks of manual high-altitude operations, making it the preferred choice for upgrading maintenance tools. Its broad potential applications are also injecting momentum into the industry's development, extending its use from traditional power and rail transit sectors to emerging fields such as agriculture, cultural relic protection, municipal management, and even photovoltaic power plant operation and maintenance.

The global Fiber Laser Obstacle Clearer market size was estimated at USD 94.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
