### Report Overview

Fiberglass mat batteries, also known as AGM (Absorbent Glass Mat) batteries, are a type of lead-acid battery where the electrolyte is absorbed in a fiberglass separator, making them spill-proof, maintenance-free, and highly resistant to vibration. These batteries are widely used in automotive, marine, renewable energy storage, and industrial applications due to their superior performance, deep-cycle capabilities, and longer lifespan compared to traditional flooded lead-acid batteries. The market for fiberglass mat batteries is driven by increasing demand for reliable energy storage solutions, particularly in electric vehicles (EVs), backup power systems, and off-grid solar installations. Growth is further supported by stricter environmental regulations favoring sealed, non-spillable batteries and advancements in AGM technology enhancing efficiency and durability. However, competition from lithium-ion batteries in high-performance applications poses a challenge, though AGM batteries remain cost-effective for many use cases. Key players focus on innovation, expanding capacity, and targeting emerging markets with rising automotive and renewable energy adoption.
