Field Assembled Silos refer to a type of storage structure used for bulk materials, typically constructed on-site rather than prefabricated in a factory. These silos are designed to hold various materials such as grains, cement, or other bulk commodities. The key characteristic of field assembled silos is that they are built by assembling prefabricated components or panels at the location where the silo will be used. This method allows for customization and flexibility in terms of size and shape, as well as the ability to adapt to the specific terrain and environmental conditions of the site. Field assembled silos can be made from various materials, including steel, concrete, or fiberglass, and are often chosen for their durability, ease of assembly, and cost-effectiveness compared to traditional silo construction methods.
