Abstracts

Fingerprint identification module cover refers to the external protective layer or panel covering the fingerprint identification module. It is an important component for realizing the fingerprint identification function. In the fingerprint identification module, the cover is tightly fitted with the fingerprint identification module, and the tight connection between the two is ensured by adhesive or other fixing methods. This fitting method helps to ensure that the fingerprint sensor is isolated from the external environment while providing a flat and easy-to-identify surface. The fingerprint identification module cover can be made of a variety of materials, such as sapphire, glass or ceramic. These materials usually have high strength, high hardness and good wear resistance to ensure stability and reliability for long-term use.

The global Fingerprint Identification Module Cover market size was estimated at USD 3850.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
