Report Overview

A Fire Control Panel, also known as a Fire Alarm Control Panel, is a central component of a fire detection and alarm system. It serves as the primary interface for monitoring, controlling, and managing the various fire safety devices and equipment within a building or facility. The panel is designed to receive signals from smoke detectors, heat detectors, and other fire-sensing devices, indicating the presence of a fire or smoke. Upon detection, the panel activates alarms, such as sirens and strobe lights, to alert occupants and initiate a response. It also coordinates with other fire safety systems, like sprinkler systems and fire doors, to help control the spread of fire and facilitate evacuation. The panel is typically installed in a secure location, such as a control room or a dedicated fire alarm panel room, and is equipped with user interfaces for manual activation and deactivation of alarms, as well as for system testing and maintenance.
