Abstracts

Fire detection light smoke sensors have many devices working together which help to proactively identify fire incidents. The goal is to catch the fire at an early stage and raise an alert (via visual or audio) to enable safe evacuation of the area. Fire detection light smoke sensors control the fire through real-time monitoring and sensing of fire induction and smoke and light generated phenomena, and then through visual and audio devices to detect and warn people and generate fire motion feedback to control the fire.

The global Fire Detection Light Smoke Sensors market size was estimated at USD 1850.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
