Report Overview

Fire-rated coiling doors are specialized rolling doors designed to prevent the spread of fire, smoke, and heat between compartments in commercial, industrial, and institutional buildings. These doors are constructed with fire-resistant materials such as steel, aluminum, or composite cores and are tested to meet stringent fire safety standards (e.g., UL 10B, NFPA 80, or EN 16034). They are commonly used in warehouses, manufacturing facilities, parking garages, hospitals, and high-rise buildings where compartmentalization is critical for life safety and property protection.
