### Report Overview

Fire-Resistant Gypsum Board is a type of construction material designed to provide enhanced fire protection in building structures. It is made from gypsum, a soft sulfate mineral, which is combined with other additives and pressed into sheets. The primary function of this board is to slow down the spread of fire and smoke, thereby increasing the time for occupants to evacuate and for firefighters to respond. Fire-Resistant Gypsum Board is characterized by its ability to maintain structural integrity and resist heat for a specified period, typically ranging from 30 to 120 minutes, depending on the thickness and composition of the board. It is often used in walls, ceilings, and partitions, especially in areas requiring higher fire safety standards such as commercial buildings, residential complexes, and public facilities. The board not only serves as a fire barrier but also contributes to the overall strength and durability of the building envelope.
