### Report Overview

A hook sensor is an electronic device used in fishing to alert anglers when a fish is biting the hook. This device senses the pulling force generated when a fish bites the hook or the movement of the fishing line, and emits a sound or light signal to alert the fisherman. Fishhook sensors can greatly improve fishing efficiency, especially at night or when anglers need to leave their fishing spots for a period of time. They can help fishermen detect fish biting the hook in time, so they can respond promptly and improve the success rate of fishing.
